ABOUT ME

Senior Frontend Engineer with 5+ years of experience in B2B and enterprise products.

TypeScript and **Vue**/Nuxt are my go-to stack, and I also work with **React**/Next.js.

I love it when I can do more than just close tickets – when I get to have a real say in how things get built: pitch UX and product improvements, talk architecture. I keep things maintainable through docs, clean code, and test coverage. When needed, I set up processes for epics and run onboarding.

My fullstack background helps me see the product as a whole – spot different solutions and weigh their trade-offs and cost.

Open to remote, hybrid, and relocation.

SKILLS

Main stack: TypeScript, Vue/Nuxt, Vuex/Pinia, HTML5, SCSS, CSS3

Also: JavaScript, React/Next.js, Redux Toolkit, Zustand

UI: Tailwind, shadcn/ui, MUI, Bootstrap, PatternFly

API & architecture: REST API, GraphQL, WebSockets, micro-frontends, monolith

Testing & quality: Jest, Cypress, Lighthouse, Core Web Vitals

Tools: Vite, Webpack, Babel, Git, CI/CD, Docker, Kubernetes

Backend: Node.js, Express, NestJS, PostgreSQL, MongoDB, Supabase

AI: Cursor, Ollama, Claude

EXPERIENCE

Senior Frontend Engineer – ORION SOFT

10/2024 - Present 1+ yr

Building B2B products for IT infrastructure.

I own the frontend of a container orchestration platform (Kubernetes). Maintain a secrets management service (Vault) and build apps that support these products.

- Delivered a redesign of the flagship product to match the new product-family design system. Set up an Agile workflow for a team of 5: in 6 months we revamped the UI, improved UX, and shipped new features.
- Wrote product documentation and built a micro-frontend plugin template — it made onboarding and feature development way faster.
- Audited project dependencies and patched 500+ high-severity vulnerabilities.
- Take part in epic planning, code reviews, onboarding, and architecture/UX discussions.

TypeScript, React, Redux, MUI, SCSS, GraphQL, Cypress, Kubernetes, Vue, Git, Docker

Middle Frontend Engineer – CYNO.ONE

07/2022 - 10/2024 2,2 yr

Outsourcing / outstaff agency. I got to work on both extending enterprise systems and shipping apps from scratch.

- Shipped three Telegram Mini Apps on a shared design system. Led the frontend in a Waterfall setup — from locking requirements and architecture through MVP to handoff to support.
- Used Lighthouse to tune LCP, FCP, and CLS by ~30%.
- Brought SEO scores up to 100% and wired in Google Analytics.
- Hooked up AWS S3 with pre-signed URLs for media.
- Built a streaming chat UI for an LLM (SSE, typewriter effect).
- Worked with Lottie animations, crafted game-like flows in CSS and JS.

TypeScript, React, Next.js, Redux Toolkit, Zustand, Vue, Nuxt, Pinia, Tailwind, SCSS

Junior Fullstack Engineer – ETU LETI IS

04/2021 - 07/2022 1,2 yr

University digitization unit: moved paper/document workflows into strict web forms with validated, consistent data.

- Built a hierarchical table with lazy loading for recursive/tree data — cut LCP by ~3s and eased load on the client.
- Under the tech lead, helped design a scalable architecture, the database layer, and the split between backend and frontend apps.
- Collected user feedback on bugfixes and feature work.

TypeScript, Vue, Pinia, SCSS, Bootstrap, NestJS, PostgreSQL, MongoDB, Jest

EDUCATION

Bachelor's in Software Engineering

2020 - 2024

Saint Petersburg Electrotechnical University "LETI" (ETU "LETI")
